## BENCHTOP, CUSTOM FABRICATION, DESIGN

Introducing the Stainless Steel Specialists.

CNS Stainless Surfaces Ltd manufactures stainless steel benchtops as well as custom-made stainless and metal products. We deliver nationwide from our centrally located factory in the Manawatu.

With over 18 years of experience in the stainless industry, we have chosen benchtops as our area of expertise. Our aim is to share our knowledge and experience with you to create the ideal kitchen for you or your client.

### Specialisation:

We provide a specialised stainless benchtop fabrication service - something that we feel is unique within the stainless steel fabrication industry. In addition to benchtops, we also manufacture all other metalwork that goes into a kitchen, or any part of the home or building, ie. splash backs, wall mounts, shelving, range hoods, hand rails or custom-made items for specific requirements.

### Value:

Due to our streamlined production workshop, we are able to produce the highest quality products for a fraction of the cost you may have expected to pay. We operate with lower overheads, and we pass the savings on to you.

### Custom:

At CNS, we have the knowledge and experience to produce custom designs, including creative shapes, waterfall ends, special bowls and many other individual requirements you or your client may request, all to the highest quality and workmanship. We have a clever, keen and co-operative team to help you work through design issues, and any possible constraints, in order to achieve the desired result.

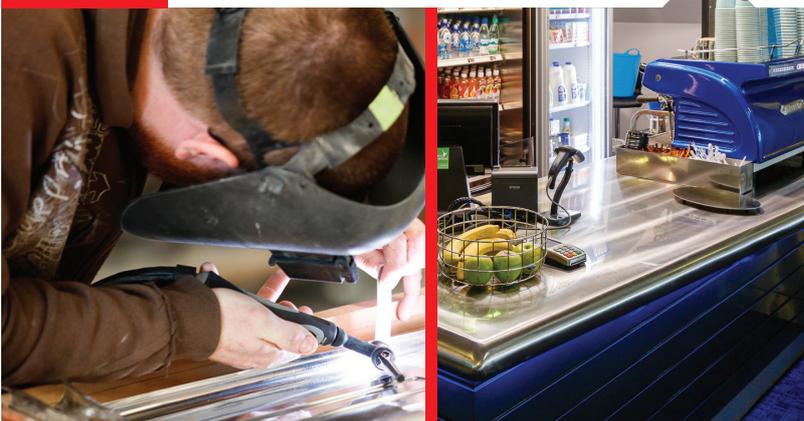

### Surface Finish:

Surface finish is critical to the success of a benchtop or surface. At CNS, every benchtop is accurately cut and formed to exactly match any pattern or design submitted, and we pride ourselves on accuracy to the millimetre. All benchtops are scrutinised to exacting standards, and do not leave the workshop until inspected and approved. Our workmanship is guaranteed.

### Delivery:

Whether it is to factory or to site, CNS will deliver on time as specified. We understand the problematic nature delays can cause, so without sacrificing quality we pride ourselves on delivering when we say we will.

*"The benchtop is wonderful; a work of art!  
It totally transforms the kitchen giving us heaps of  
space and making the space look sophisticated and  
contemporary. Its beautifully made!" says Andrea*

*"We would love to have the opportunity to sit down and  
discuss how we can help you. Thank you for taking the  
time to read this introduction. If you have any questions or  
would like to request a quote, please feel free to contact  
me directly or visit our website." -Colin Harper (Director)*

## Choice and Versatility:

With the many textured finishes available, stainless steel can be used to create decorative features that make a strong statement in the home. An array of embossed, patterned and coloured metal finishes provide a large selection of designs that are modern and attractive in appearance - offering a wealth of versatility.

## Pattern:

Patterns can also be produced to achieve different visual effects. Coloured surfaces are colourfast, so the colour is inherently part of the stainless steel.

Multiple surface finishes can be combined on the same product with the appearance of a seamless surface - lending to freedom of creativity and individual style for you or your customers.

## Durability:

Stainless steel is a very durable product and can be confidently used in the hardest wearing work environments, without losing its visual appeal and without the risk of being easily damaged.

Please contact CNS if you would like further information on any of the above, or would like some product samples sent out.

**Our ambition is to supply benchtops  
with the WOW factor. - Colin Harper**

## Hygiene:

Unlike other surfaces, stainless steel will not chip, crack, peel or fade over time, and with a buffing service every two years, a classic finish benchtop can be brought back to near new again.

Stainless steel is the product of choice in the food industry throughout the world. It is a non-porous surface, therefore bacteria can easily be cleaned away. There are no joins or gaps for the bacteria to build up in, thus creating an easy-clean, hygienic work surface.

Follow the surface care guide below for best results.

## Surface Care:

Dirt and grease accumulate over time from many sources. This can easily be removed by:

- ◆ Routinely cleaning with warm, soapy water, followed by rinsing with warm, clean water, and finish by wiping dry with a clean, absorbent cloth.
- ◆ For textured surfaces, a nylon bristled brush will remove any dirt and grime which may accumulate in the valleys of the textured finish.
- ◆ Never use abrasive cleaners, as nearly all of these will scratch the bright, polished stainless steel surface.
- ◆ Also never use steel wool to clean the surface as this will leave rust stains.
- ◆ If marks such as finger-prints are a problem a light surface coating of baby oil, clear silicone wax polish or furniture polish such as Neopol will help prevent reoccurrence of this.
